

SI Figure 3. Simulated average transpiration (a), runoff (d), and soil moisture (g) for a control simulation; and percent change from control in transpiration (b-c), runoff (e-f), and soil moisture (h-i) after including a nighttime threshold (Δg_{night} ; b,e,h) or a minimum g_s threshold (Δg_{min} ; c,f,i) based on median observational $g_{s,n}$ values. Note that both nighttime and minimum thresholds were adjusted based on a soil moisture scalar.
