53 **Figure S1:** Average predicted absolute (μgm^{-3}) difference (alternative aging scheme
54 minus base case) of ground-level PM_{2.5} total BBSOA and BBOA concentrations from
55 PMCAMx-SR base case and alternative aging scheme simulations during the modeled
56 periods. Positive values indicate that the PMCAMx-SR alternative scheme predicts
57 higher concentrations.

62 **Figure S2:** Average predicted increase ($\mu\text{g m}^{-3}$) of the predictions of the base
 63 PMCAMx-SR scheme when the effective enthalpies of vaporization of Ciarelli et al
 64 (2017) are used compared to the predictions with the default enthalpies for ground-
 65 level PM_{2.5} (a) bbPOA, (b) bbSOA-sv (c) bbSOA-iv and (d) bbOA during April 2008.
