

Some countries give an estimate of the emissions reductions resulting from their actions and policies (NGT), in which case we can reclassify it as ABU target.

Additional information: *target year(s)*, *conditionality* (un-/conditional), *range* (best/worst), and *coverage* (sectors & gases).

Data from non-NDC sources needed for comparison purposes and if no / not all necessary emissions / population / GDP data are given in an NDC.
