Published: 5 April 2022

The model code and data used in the publication of the original article were stored in a repository which, at the time of publication, did not meet the journal’s requirements for persistence. The model code and data have since been archived at Zenodo. The corrected “Code and data availability” statement is found below.

*Code and data availability.* Data and model code used in the writing of the paper are available at Zenodo: <https://doi.org/10.5281/zenodo.6250862> (Kvale, 2021).

Instructions for model use are as follows: the code was preprocessed using the ifort fortran compiler and should be compiled using the same. The mk.in file provides the location to change compiling options. The control.in file provides the location to adjust simulation parameters. The preprocessed code is sufficient to reproduce the model output used in the writing of the paper. Unprocessed (.F) files and a makefile are required in order to modify the model options. These can be obtained from the corresponding author.
