The graph shows the runtime (in seconds) for different work-package sizes with and without DHT (Distributed Hash Table) support. The x-axis represents the number of workers, and the y-axis represents the runtime. Three lines indicate work-package sizes of 4, 16, and 128, with different colors and markers. The graph demonstrates that runtime decreases as the number of workers increases, with or without DHT, and that larger work-package sizes generally have longer runtimes.
