3 Table S1. Burned area datasets used in this study

4

Dataset name	Temporal range	Spatial resolution	Burned area, mean (std)	Citations
GFEDv4s	1997-2015	0.25 degree	455(39)	(Van Der Werf, Randerson et al. 2017)
Fire_CCI51	2001-2019	0.25 degree	476(26)	(Lizundia-Loiola, Otón et al. 2020)
Fire_CCILT11	1982-2018	0.25 degree	484(20)	(Lizundia-Loiola, Pettinari et al. 2018)
MCD64	2001-2019	0.25 degree	424(35)	(Giglio, Boschetti et al. 2018)
Fire_Atlas	2003-2016	0.25x0.25 degree	459(43)	(Andela, Morton et al. 2019)

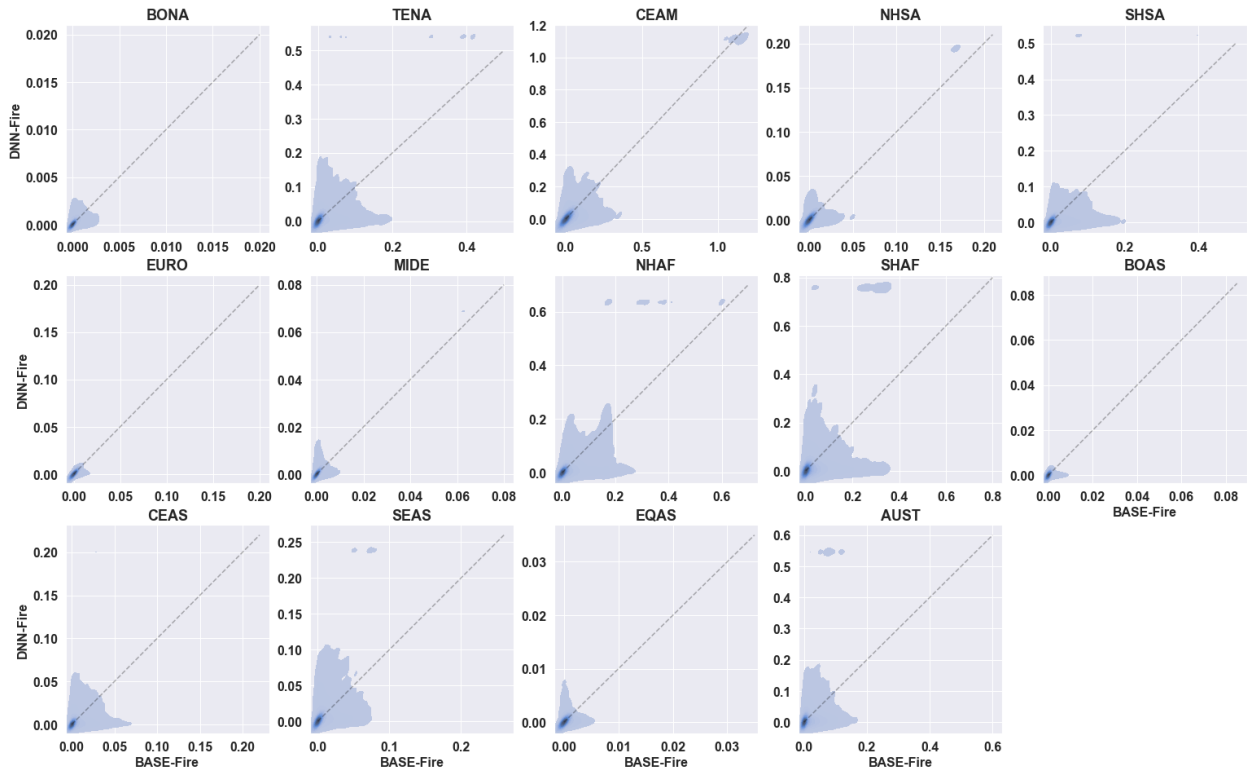

5 **Note:** the long-term average global burned area was calculated using data with the same  
6 overlapping temporal range (2003-2015), unit Mha yr<sup>-1</sup>

7

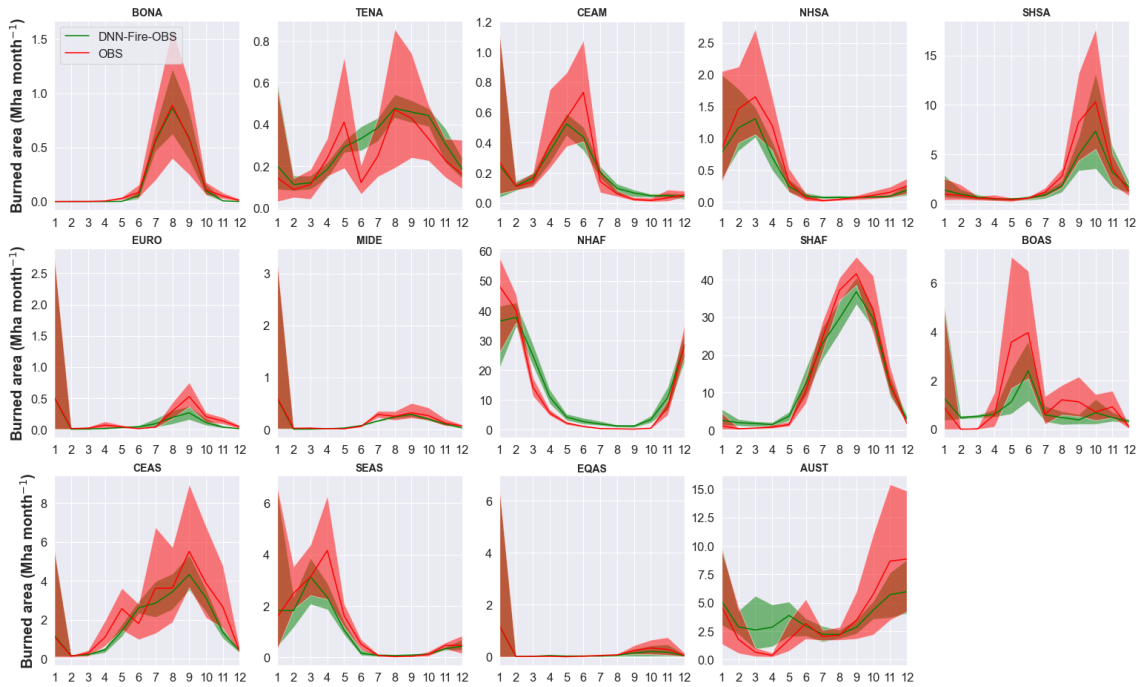

9  
10  
11  
12  
13

**Figure S1.** Model performance evaluated with testing datasets of default (20% randomly selected samples), or fixed to 2001-2002 period, 2003-2004 period, 2005-2006 period, 2007-2008 period, and 2009-2010 periods (the rest of the dataset was used as a training dataset.).

14

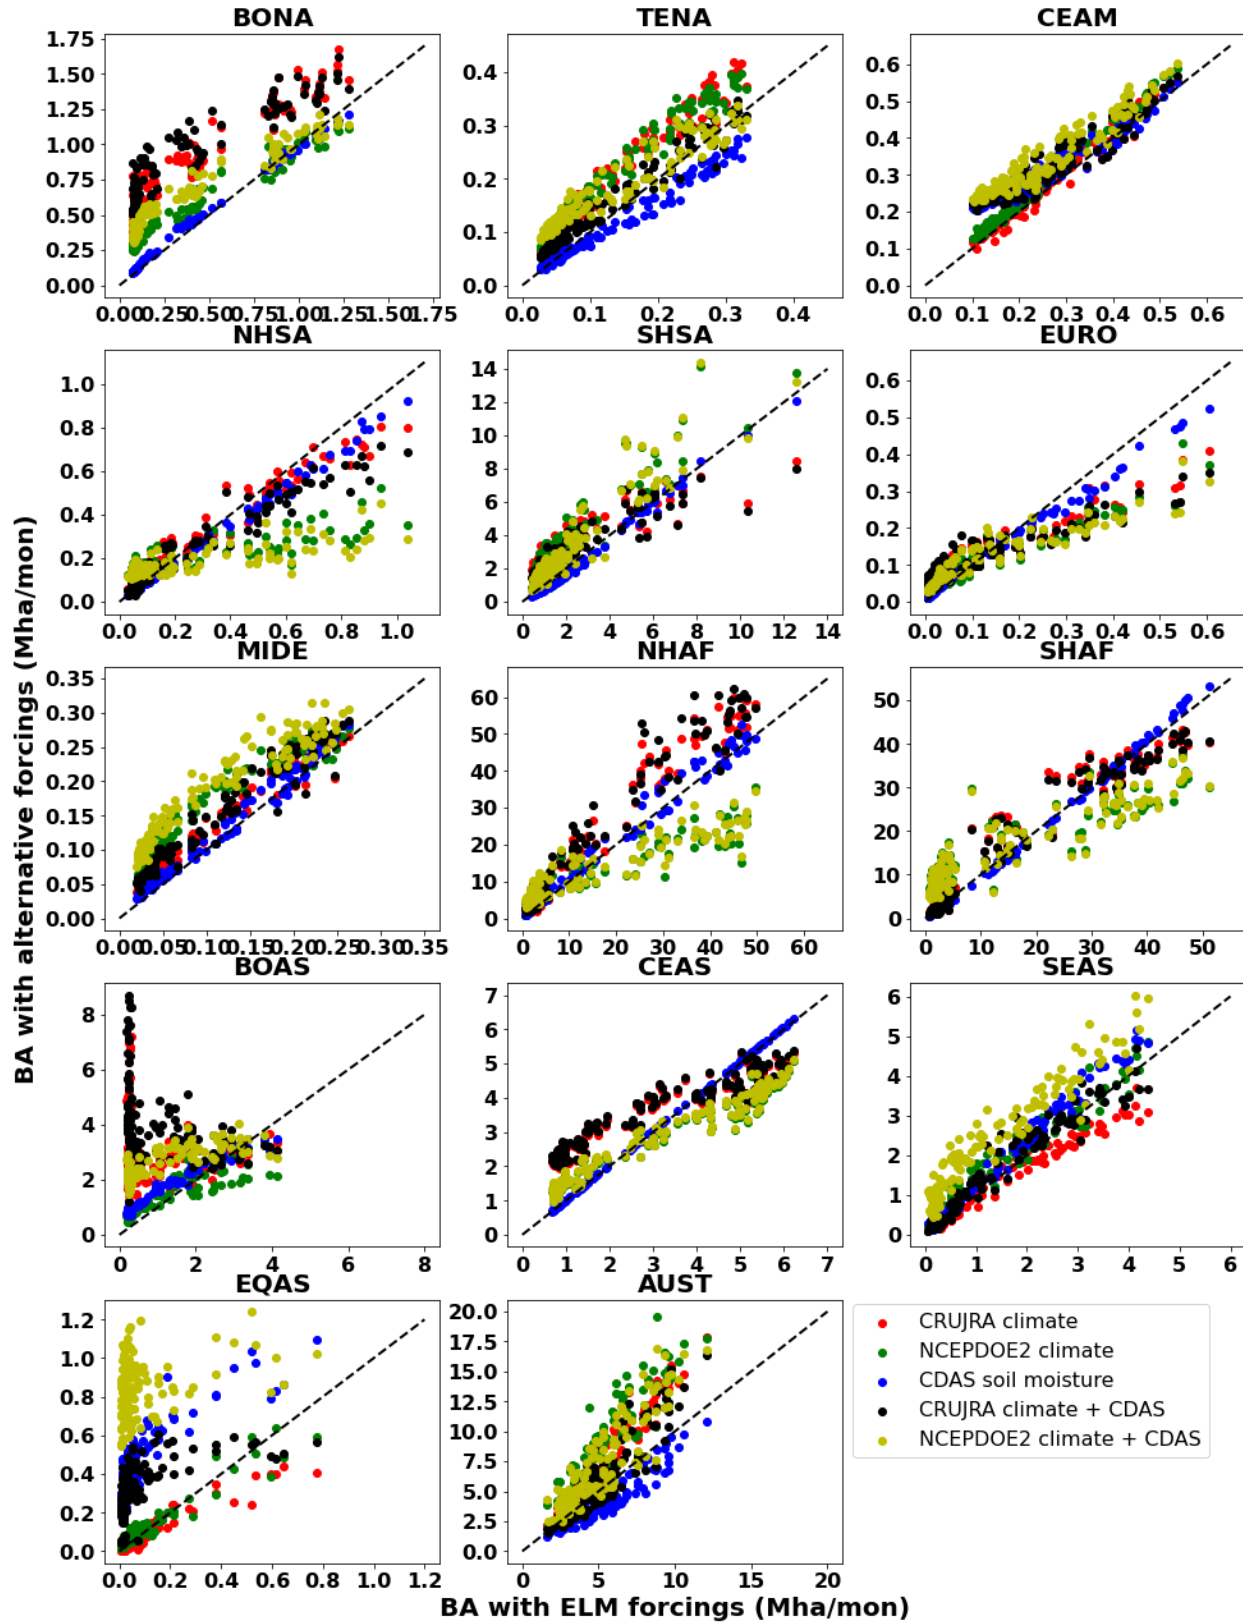

15 **Figure S2.** Performance of surrogate model (DNN-Fire) compared with ELMv1 process-based  
 16 model (BASE-Fire).  
 17

18 **Figure S3.** Seasonal cycles of fine-tuned Deep Neural Network wildfire model (DNN-Fire-OBS)  
 19 and observations over 14 GFED fire regions.  
 20  
 21  
 22

23 **Figure S4.** Comparison of DNN-Fire-OBS model simulated global burned area during 1981-  
 24 1999 with two charcoal index inferred burned area.  
 25

26  
 27 **Figure S5.** Sensitivity of modeled burned area (2001-2010 long-term averaged) to climate  
 28 forcings (including temperature, precipitation, wind speed, relative humidity) and soil moisture.

29 X-axis was burned area simulated by the default model using GSWP3 climate forcing and  
 30 ELMv1 simulated soil moisture. Y-axis were models with alternative climate forcing (CRUJRA,  
 31 NCEPDOE2) and soil moisture product (NCEP CDAS soil moisture).  
 32  
 33

34  
 35 **Figure S6.** 3SM simulated global vegetation biomass [425-472 PgC] and observational based  
 36 estimate of present-day living biomass (455 PgC GEOCARBON).  
 37

38  
 39 **Figure S7.** The performance of the Deep Neural Network wildfire model (DNN-Fire), compared  
 40 with the original ELMv1 process-based wildfire model (BASE-Fire) aggregated over 14 plant  
 41 functional types between years 2001 and 2010.  
 42  
 43

44  
 45 **Figure S8.** A comparison of wildfire burned area among Deep Neural Network wildfire model  
 46 (DNN-Fire), Deep Neural Network wildfire model fine-tuned with observed burned area (DNN-  
 47 Fire-OBS), and observations for 14 plant functional types.
