Abstract

In this supplement, we provide additional figures to discuss: 1) isoprene emissions, 2) regional aggregation of ozone sondes, 3) comparison with the aircraft observations climatology of Emmons et al. (2000), 4) comparison with the Measurements of Pollution in The Troposphere (MOPITT v4, Deeter et al., 2010) data and 5) tropospheric OH distribution with the Spivakovsky climatology (Spivakovsky et al., 2000) using the Lawrence et al. (2001) diagnostic approach.

1 Introduction

2 Conclusions
