Received and published: 9 October 2012

Sorry for the delay - I have been away for a few weeks.

David Archer made minor suggestions and broadly approves of the paper. Yves Godderis requires more context (discussion of other models) and queries some of the formulations used in the model. In addition there is the requirement to make the process of acquiring, and compiling the model more transparent. All in all, there seems to be plenty for you to get your teeth into, so please submit a revised manuscript after attending to the required revisions.
