

Interactive comment on “The OASIS3 coupler: a European climate modelling community software” by S. Valcke

M. Carter (Referee)

mick.carter@metoffice.gov.uk

Received and published: 29 October 2012

General Points

The paper provides a good description, in details, about how OASIS has been used in a major international project and make useful observations and conclusions on the implications.

The paper is based on factual information obtained from various experts (which I am unable to check in detail) and justified conclusions are made.

I have suggested a number of optional editorial changes to make the paper a little easier to read direct to the author.
