Interactive comment on "An approach to computing direction relations between separated object groups" by H. Yan et al.

H. Yan

h24yan@uwaterloo.ca

Received and published: 25 July 2013

We are very grateful to S. Ying whose comments must help to improve the quality of this paper.

The following will discuss the questions S. Ying given in the comments one by one.

1. We have a slight error in Fig.3. We will revised it in the final version to GMD.

2. According to our experiments, the testees are easier to understand the model with the Voronoi/TIN in Fig.11.

3. We will add an example to discuss the computation of the inversion of the model.
