The application of the skill score to the daily re-initialized simulation (Case 4 in Fig. 5 in Interactive Comment/Answers to Referee #2, Geosci. Model Dev. Discuss., 6, C830–C838, 2013) was wrong. To compare between the cases with and without frequent re-initialization, the same definition of the skill score has to be used, i.e., the same cumulative Lagrangian distance (observed) during the same simulation period (3 days). The skill scores of Case 4 are now correctly defined in the attached figure.
