Received and published: 28 October 2014

Dear Authors,

According to the evaluation from two reviewers, the novelty of this study seems not enough to be published in the GMD journal. Then, the probability for publication of this paper is supposed very low even after the further revision.

So I would recommend the authors to withdraw this paper this time, and try another journal more appropriate to publish, though, of course, you are still entitled to resubmit it to GMD.

C2170

As the EGU journal applies unique review process, I cannot make any decision before your second submission. However, I suppose that it's better to avoid spending much time on revising this paper, which is not going to be accepted by the 2nd review easily.

Best regards,

Topical Editor,

Tomomichi KATO
