

Interactive comment on “On the wind stress formulation over shallow waters in atmospheric models” by P. A. Jiménez and J. Dudhia

H. Weller (Editor)

Many thanks to both reviewers for two very helpful reviews. The reviewers and I agree that this looks like a potentially very useful piece of work. But significant work is needed to make the results completely reproducible and to explain the processes which might lead to the change in wind stress over shallow seas.

I look forward to hearing about how the authors plan to address the reviewer's comments.
