

Interactive comment on “WRF4G: WRF experiment management made simple” by V. Fernández-Quiruelas et al.

Anonymous Referee #1

Received and published: 2 September 2015

The workflow described in this manuscript is neither new nor does it make significant contributions to existing tools already available. The one new and novel approach is the multiple scenario function. Other than that the WRF Portal does the same and significantly more than WRF4G. The biggest problems most users face is compiling the code. Once this as been done, 90% of the technical issues are solved. This tool just add an extra layer on top of the current way of running the model. This adds complexity without added benefits.
