Dominicis

We thank anonymous referee #2 for taking the time to review the paper and for their insightful feedback. Our specific comment is given below.

Referee's comment

... it would be interesting to see the model extended to take into account not only beaching of the oil spill, as described by the authors, but also interactions of the oil spill with response equipment like booms and chemical dispersants.

Our response

We believe that this comment provides a very good extension to CranSLIK and we will be happy to include the idea and explore this path in the future.
