Interactive comment on "A simplified gross primary production and evapotranspiration model for boreal coniferous forests – is a generic calibration sufficient?" by F. Minunno et al.

F. Minunno et al.

francesco.minunno@helsinki.fi

Dear authors, In my role as Executive editor of GMD, I would like to bring to your attention our Editorial: http://www.geoscientific-model-development.net/gmd_journal_white_paper.pdf http://www.geosci-model-dev.net/6/1233/2013/gmd-6-1233-2013.html This highlights some requirements of papers published in GMD, which is also available on the GMD website in the 'Manuscript Types' section: http://www.geoscientific-model-development.net/submission/manuscript_types.html Reply: We apologize for not providing the model code before. It was an oversight.

Discussion Paper

In particular, please note that for your paper, the following requirements have not been met in the Discussions paper – please correct this in your revised submission to GMD. "– The paper must be accompanied by the code, or means of accessing the code, for the purpose of peer-review. If the code is normally distributed in a way which could compromise the anonymity of the referees, then the code must be made available to the editor. The referee/editor is not required to review the code in any way, but they may do so if they so wish." Reply: In the Supplement material we provided an R package of PRELES 1.1. Note that actual model code is written in C but can be run from R installing the "Rpreles_1.1.tar.gz" package. For any further issue please do not hesitate to contact me.

– All papers must include a section at the end of the paper entitled "Code availability". In this section, instructions for obtaining the code (e.g. from a supplement, or from a website) should be included; alternatively, contact information should be given where the code can be obtained on request, or the reasons why the code is not available should be clearly stated. Reply: A new section (5 Code availability) has been added at the end of the paper.

– All papers must include a model name and version number (or other unique identifier) in the title. Reply: The name and the version of the model have been added in the title.

Please also note the supplement to this comment:
