Comment 1: *The study speaks strongly via solid mathematical derivations for replacing the MM and RMM formulations by ECA kinetics. Evidence of testing the application of ECA in modeling plant-microbe interactions was discussed through recently published work by Zhu et al (2015) and the author himself. Other potential literature in microbial models may also need to be considered (i.e. Li J, G. Wang et al 2014; Manzoni S, G. Pineiro et al 2012). Except a few typos that need to be corrected, the current paper deserves a rapid publication so that it is expected to motivate more studies to*

emerge in order to advance the soil biogeochemical model development.

Response: Thanks very much for your positive comments. I corrected the typos in the revised manuscript.

Comment 2: *Possible typos: Equation 21: denominator [E]T should be [S]T Figure 4 caption: enzyme should be changed to substrate.*

Response: Sorry for the typos that I missed in the proof reading, now they are corrected in the revised manuscript.
