Received and published: 3 December 2015

Dear authors,

In my role as Executive editor of GMD, I would like to bring to your attention our Editorial version 1.1:

<http://www.geosci-model-dev.net/8/3487/2015/gmd-8-3487-2015.html>

This highlights some requirements of papers published in GMD, which is also available on the GMD website in the ‘Manuscript Types’ section:

http://www.geoscientific-model-development.net/submission/manuscript_types.html

In particular, please note that for your paper, the following requirement has not been
C3157

met in the Discussions paper:

- "The main paper must give the model name and version number (or other unique identifier) in the title."
- "If the model development relates to a single model then the model name and the version number must be included in the title of the paper. If the main intention of an article is to make a general (i.e. model independent) statement about the usefulness of a new development, but the usefulness is shown with the help of one specific model, the model name and version number must be stated in the title. The title could have a form such as, "Title outlining amazing generic advance: a case study with Model XXX (version Y)."

Therefore please include a version number of the Plant-Craig convection scheme in the title of your article in your revised submission to GMD. Additionally, please add the name of the ensemble system (at its best with version number) in the title: e.g., "Evaluation of the Plant-Craig stochastic convection scheme (vX.Y) in the ensemble forecasting system MOGREPS-R (vZ.W)"

As not everybody knows that MOGREPS is based in the Unified Model it might even better be an option to change the title in something like "Evaluation of the Plant-Craig stochastic convection scheme (vX.Y) in the ensemble forecasting system MOGREPS-R (vZ.W) based on the Unified Model (v7.3)"

Yours,

Astrid Kerkweg
