Dear Astrid,

In response to your comment:

“Dear authors, In my role as executive editor I ask you to move the Data Availability Section to its regular place after the conclusion but in front of the Appendix when revising your article. Thanks, Astrid Kerkweg“

The Data Availability Section was placed as you request after the Conclusions and before the Appendix and Acknowledgements in the version we have submitted, and

C3427

therefore followed the guidelines that are given on the GMD website and that we have received from our editor:

“Inclusion of Code and/or data availability sections is mandatory for all papers and should be located at the end of the article, after the conclusions, and before any appendices or acknowledgments.“

However, this section has then been moved by the editorial office during the typesetting. I had asked to move it back to where it was when I have received the proofs, but have received the following response from the editorial office:

“Please note that according to our house standard, the section “Data availability” remains unnumbered and is placed after the Appendix and before Supplement, Author contribution, and Acknowledgements.”

This differs from the guidelines on the GMD website. Please clarify this within the editorial office and provide guidance where to place the Data Availability Section in the final version.

Thanks and best wishes, Veronika Eyring
