Interactive comment on "PLASIM-GENIE: a new intermediate complexity AOGCM" by P. B. Holden et al.

P. B. Holden et al.

p.b.holden@open.ac.uk

Received and published: 8 April 2016

Dear Jules,

thanks for the ideas to make PLASIM-GENIE more accessible. As requested we have now added additional material explaining how to run the model. This is mostly in the form of a configuration file for running a simulation with the subjective parameter set. This configuration file has been commented in detail. All parameters are now described in some detail within the manuscript. The configuration file will be provided on the svn, though it may be useful to also provide this as supplementary material.

We agree that reference to an SVN revision is useful and we would prefer to provide access to the code via this route (rather than as a tarball as in the original submissions).

C4348

In particular this approach will enable a new user to benefit from ongoing model developments, as well as to have access to a traceable version of the model described here.

Many thanks, Phil
