Received and published: 8 August 2016

Dear Dr. Elvidge,

thank you for your reply from 5 August 2016.

The authors are puzzled about the different tenor in the two reviews we have achieved from you. We regret that you have the impression we are not willing to invest additional work for this study. Under point 4 of our reply from 3 August 2016 we followed your idea to compare your dataset with our study. Maybe one of your team can give us information on how to use the full VNF data files correctly and how to separate the flaring sources from other combustion sources (e.g. forest fires). With this data set, under consideration of the cloud correction, we will repeat our study.
