We would like to appreciate the valuable comments which help for improving the manuscript. In the revision, we clarify the metrics to quantitatively evaluate model performance and add some validation results concerning TC surface wind structure (Figures 5 and 6). Figures 1 and 2 are redrawn by using the result of Stage 2 only with 95% confidence levels as error bars rather than standard deviation. Careful analysis of simulated TC position revealed that some misdetection occurred for very weak TC cases. These cases are excluded from validation.
