

# ***Interactive comment on “Global Gridded Crop Model evaluation: benchmarking, skills, deficiencies and implications” by Christoph Müller et al.***

## **Anonymous Referee #2**

Received and published: 21 October 2016

The development and evaluation of the global gridded crop models is a critical step in being able to provide an evaluation of the potential impacts of climate change on future global production. The authors have done a good job in explaining the process and the shortcomings in different models and approaches. This effort will set the stage for the next generation of improvements in crop models at all scales.
