Dear Robert,

the best option would be to make the version somehow unambiguously identifiable. Maybe something like: "CESMX.Y_nameandnumberdevbranch" (e.g. CESMX.Y_iris03) where you can freely chose the type of subname and version number of your development branch. If you have good reasons to reject such a naming the very weak statement "based on CESMX.Y" would be also acceptable. But this would not serve the purpose to make the code including your development locatable

Cheers, Astrid
