Interactive comment on "eddy4R: A community-extensible processing, analysis and modeling framework for eddy-covariance data based on R, Git, Docker and HDF5" *by* Stefan Metzger et al.

C. van Heerwaarden (Editor)

chiel.vanheerwaarden@wur.nl

Received and published: 30 April 2017

The paper has received very detailed reviews with excellent suggestions to improve the paper. The reviewers see the novelty an applicability of the presented framework, but demand improvements in order to accept the paper.

The authors have given excellent answers to the reviewers' concerns and by incorporating their suggested improvements, this paper will most likely meet the standards of GMD. Important here is that the reviewers provide a working example as requested by the third reviewer. This will greatly improve the quality of the paper.
