Received and published: 4 July 2016

Response to SC2 by Klaus Wyser:

"Table 1 and 2 of the paper suggest that the volcanic forcing is from MACv2-SP. However, MACv2-SP is only providing anthropogenic aerosols. The volcanic forcing in High-ResMIP should be handled in a similar way as in the other MIPs: use prescribed strato-spheric aerosols, see <http://www.wcrp-climate.org/wgcm-cmip/wgcm-cmip6> for details."

Thank you for pointing out this error. We have corrected this in the revised manuscript.
