Received and published: 2 June 2016

We appreciate the time and efforts by the Editor checking our manuscript. We have addressed all issues indicated in the similarity report, and hope that the revised version may meet the publication requirements. Most of the similarities were due to the manual written by the main authors which is available online. Remaining 7% similarity was caused by similarity of site and model descriptions with our earlier published work. We rephrased these parts in order to avoid copying sentences from other papers even so every similar sentence was written by the authors.

Please also note the supplement to this comment:
