Received and published: 21 July 2017

In order to maintain a high degree of reproducibility the model version referenced in a manuscript need to be marked as a release in GitHub if this is the mechanism to make the code accessible. Commits into the repository after submission of the paper can compromise reproducibility if it is not clearly documented which status of the repository is discussed in the manuscript. GMD is strongly encouraging (but does not enforce) authors to provide persistent access to their program code and data used in the manuscript. Typically this is guaranteed through the use of a DOI which can be created for releases made in GitHub using Zenodo. This DOI should be cited in the paper.

C1

The author should also clearly state in the paper which version of OpenFOAM has been used and add a brief statement on the licence under which sedfoam can be used.

Many thanks
