Interactive comment on "On the Predictability of Land Surface Fluxes from Meteorological Variables" *by* Ned Haughton et al.

L. Gross

l.gross@uq.edu.au

Received and published: 5 August 2017

Thanks for your manuscript. In order to ensure reproducibility of results presented in the manuscript GMD is expecting that - where ever possible - permanent access to the software the paper is based on is provided. This can be through a DOI of a release (e.g via Zenodo) or by uploading a tarball of the source code and the examples presented in the manuscript.

Please provide permanent access to your model software in a revised version of your manuscript. Also update the code accessibility section including a clarification on the license of use (e.g. https://en.wikipedia.org/wiki/Creative_Commons_license). It is recommended that the license of use is also added into the header of each file.
