Takashi

As explained in [https://www.geoscientific-model-development.net/about/manuscript\\_types.html](https://www.geoscientific-model-development.net/about/manuscript_types.html) GMD is encouraging that authors upload the program code of models (including relevant data sets) as a supplement or make the code and data available at a data repository preferable with an associated DOI (digital object identifier) for the exact model version described in the paper. If for some reason the code and/or data cannot be made available in this form authors need to state the reasons, for why access is restricted (e.g. licensing restriction), in the code availability section. In the case of this manuscript I would like to encourage the authors to provide the source code as a sup-

C1

plement and also add some statements on the environment required to run the model (e.g. programming language, code dependencies).
