Received and published: 6 November 2017

Michael

GMD is encouraging authors to provide persistent access to the released source code and data through the use of a DOI which then can be cited in the paper. For projects in GitHub a DOI can be created using Zenodo, see <https://guides.github.com/activities/citable-code/> for details. Please note that in the code accessibility section you can still point the reader to the GitHub repository for the newest version even if you use a DOI for the relevant release.
