Received and published: 13 December 2017

As explained in https://www.geoscientific-model-development.net/about/manuscript_types.html GMD is expecting that authors upload the program code of models (including relevant data sets) as a supplement or make the code and data citable through a DOI (digital object identifier) for the exact model version described in the paper. As the FLake is "freely available" the authors should apply one of these access options.

If for some reason the code and/or data cannot be made available in this form authors need to state the reasons for why access is restricted. As REMO(-FLake) is available on request only you need to clearly state why and how the access is restricted (in

general this would be for licensing reasons).
