

Interactive comment on “Methods of investigating forecast error sensitivity to ensemble size in a limited-area convection-permitting ensemble” by Ross Noel Bannister et al.

J. D. Annan (Editor)

jdannan@blueskiesresearch.org.uk

Received and published: 20 November 2017

A couple of minor details that I perhaps should have asked for before initial publication, but which can hopefully be addressed in any revision:

We generally request that the paper title refer specifically to the model name/version number under consideration, i.e. in this case perhaps you could add to the title something like ":case study using model vX.X"

The code availability description is rather too vague. Please specify in more detail which pieces of code are available, and which if any are not (with some justification for

C1

the latter).

However neither of these details need affect the peer review of rest of the content of the paper.
