Received and published: 22 December 2017

As explained in https://www.geoscientific-model-development.net/about/manuscript_types.html GMD is promoting that the program code (including data) described in the manuscript is publicly available through a permanent arrangement. Given the impermanence of email addresses, GMD encourages authors acting as a point of contact for obtaining the code to improve the availability with a more permanent and public arrangement. When copyright or licensing restrictions prevent the public release of model code, or in the cases where there is some other reason for not allowing public access to the code the reasons must be clearly stated in the “Code Availability” section.
