GMD does not necessarily require for a Model evaluation paper to make statements about code availability. This is applied under the assumption that the manuscript is referencing a paper that describes the model being evaluated and that this paper states how to obtain access to the program code of the model. As this does not apply for this manuscript, the authors need to explain how to access the code. As stated in [https://www.geoscientific-model-development.net/about/manuscript\\_types.html](https://www.geoscientific-model-development.net/about/manuscript_types.html) for "Model description papers" the preferred option is that authors upload their code and the data as supplement.
