

**Response to the topical editor (Slimane Bekki)**

***There are various tables providing boundary conditions for emissions. The authors should provide them under the form of ascii files with a link. That way, modellers who want to run the experiments just have to download the input files instead of having to recreate the files from the tables.***

Dear Dr. Bekki,

Thank you very much for your comment. We will include links to all input fields in the revised manuscript and on our web page <http://www.isamip.eu> . This should ensure that all modellers could easily download the data in either ASCII or NETCDF format.
