Dear Authors,

As explained in [https://www.geoscientific-model-development.net/about/manuscript\\_types.html](https://www.geoscientific-model-development.net/about/manuscript_types.html) GMD is encouraging that authors upload the program code of models (including relevant data sets) as a supplement or make the code and data or the exact model version described in the paper accessible through a DOI (digital object identifier). In case your institution does not provide the possibility to make electronic data accessible through a DOI you may consider other providers (eg. zenodo.org or CERN) to create a DOI. Please note that in the code accessibility section you can still point the reader how to

C1

obtain the newest version.

If for some reason the code and/or data cannot be made available in this form (e.g. only via e-mail contact) the “Code Availability” section need to clearly state the reasons for why access is restricted (e.g. licensing reasons).

[https://www.geoscientific-model-development.net/about/manuscript\\_types.html](https://www.geoscientific-model-development.net/about/manuscript_types.html) also states that

- "The main paper must give the model name and version number (or other unique identifier) in the title."

Please add a version number for the GRIDLI model in the title upon your revised submission to GMD.

Best regards, Astrid Kerkweg
