SC1 - Thank you for your time and comments. While we agree that production of a consistent time series of N₂O emissions would be valuable, production of N₂O emissions was not part of the project scope. N₂O emissions are available from EDGAR. We note that the CEDS system is being prepared for release as open source software, and we would welcome collaboration to extend the emission species (such as N₂O and F-gases) included in this system.

The text in the supplement to this response briefly describes the methane emissions produced by the CEDS project after the paper was submitted. The text and figures
