Dear Authors,

I went through items in your response letter, and I was satisfied with your revision except following concerns. Note that sentences in blue color are taken from your letter.

(1) Caption of the new figure 1
Explain the difference between arrows with solid and dashed lines.

(2)
Page 6, line 22: "the actual value of fPN_{plant} may be higher than 1" - what is the implication for plant P uptake? Is it realistic?
DSG: This is the justification for the min() in the equation which was missing. we corrected the equation
It is difficult to understand this sentence as a justification for the min(*,1.0) in the equation 7. More easily comprehensible explanation is required here.

(3)
P31, L21: typo? Should be "-44.7%" here.
DSG: corrected
NOT corrected.

Best,
Hisashi SATO
