Dear professor,

According to the other referee's comments about the inter-model differences in the OGCM replacement case, we realized that surface evaporation is one part of the changes induced by ocean advection. The oceanic dynamical effect plays an important role in modulating the atmospheric and oceanic circulations through air-sea feedback. Other modifications in the manuscript are consistent with your comments.

Authors' response has been provided in the previous post, together with the marked-up version regarding each question in your comments. The attachment of this post only contains the revised manuscript.

Thank you for your time.

Sincerely,

Gui Shu
