In this comment, I do not directly answer each question or prove the validity of the research findings. In fact, I have integrated the CGCMs for 1000-year realizations that exhibit no sign of climate drift. There are some other figures that have been omitted in the manuscript due to time limitation of writing this paper. Under the supervision of my mentor, I do the research carefully and discuss the findings with teachers and classmates in our research team. Comments like "No information is provided" or "lack of concrete evidence" are likely due to my writing habits that only focus on the innova-

tive points. Currently, I am busy with my graduation paper so that the reponse to these comments have to be postponed. I will probably have enough time two weeks later to answer each question and revise the manuscript.
