Received and published: 12 March 2018

1. Please include the version number for PIC in the title, and throughout the manuscript.
2. The precise version of the code discussed in the manuscript must be made available. The current best practice is for this code to be uploaded to a public repository and a DOI assigned. The DOI should be cited in the manuscript. github is inadequate because it does not readily link to the precise version of the code. However, making github code citable is not difficult; see: <https://guides.github.com/activities/citable-code/>
