Dear authors, please note, that if only one model is concerned, the title of a GMD manuscript should state the model name (or its acronym) and a version number. These are also important to know in the case of an evaluation, as different versions might perform differently for the same evaluation procedure. Therefore please change the title of your manuscript accordingly upon revision; e.g., "Impact of model resolution on Holocene climate simulations of the Northern Hemisphere, a case study with ECHAM 5.x.y". Please be precise about the ECHAM version (also in the main body of the paper). Did you really use ECHAM 5.0? The subversion numbers are important as the subversions differ considerably. In addition please be more precise about the license conditions of the model. State explicitly how a user can acquire a license.

C1

AW: Adjusted the paper's title as recommended by A. Kerkweg. Complemented the model's subversion in title and main body. Added the contact link (<http://mpimet.mpg.de/en/science/models/license>) as entry point of the acquiring process of getting an ECHAM 5.3 license.
