

Interactive comment on “Analysis fire patterns and drivers with a global SEVER-FIRE model incorporated into Dynamic Global Vegetation Model and satellite and on-ground observations” by Sergey Venevsky et al.

I. C. Prentice

c.prentice@imperial.ac.uk

Received and published: 27 October 2018

Sergey Venevsky has responded in detail to my commentary. He states correctly that my comments are principally about the way in which the new model was presented, rather than being a critique of specific aspects. In his response he has clarified a number of points that were not clear to me on reading the preprint, and suggested various ways in which the presentation could be improved. In particular, he has clarified what are considered to be the most important innovations introduced in the model. Inclusion of these changes will improve the manuscript.
