Received and published: 15 April 2019

A web application for interactive exploration of the tracks of manuscript's Sect.4 and Supplementary Material is available at <http://www.atlantos-visir.com/>. The application allows zooming-in optimal tracks, checking their capacity in landmass avoidance and getting the EEOI savings compared to the least-distance track. Finally, the tracks can be filtered by calendar month, easing to visualize the seasonal dependence.
