Dear A. Kerkweg,

To answer to your requests, we have inserted in the title of the revised version of the paper the version number (v5.2) of the Meso-NH code used in the present work. The immersed boundary method described in the paper is implemented in the code such as an additional numerical scheme and therefore we do not think that it is necessary at this step of development to affect a version number for the IBM module. As it mentions in the code availability section, the source files will be accessible on a CERFACS server. Note that the implementation of the IBM in the last version of MNH (v5.4) is currently
