This is a very interesting paper and the way it is presented is very useful. I particularly like the inclusion of the code at the end. The paper is well written - a few minor edits to sentences would tidy it up a little - and well structured, and the illustrations are useful. For me the text is a little wordy in places - and whilst I applaud the way the discussion is integrated with aspects of the method - I would like to have seen the method completely separated from any discussion etc. and perhaps the inclusion of a flow diagram of the method added. But this may just be a personal view. The only other thing that I wondered about is whether there is any thoughts on using a UAV/drone based model as another comparison if appropriate. Overall this should be of benefit to a number of people.
