Received and published: 22 June 2018

To maintain reproducibility the authors need to tag the release in the GitHub repository that matches the model version described in the paper. This grantees that check-ins after manuscript submission don't compromise reproducibility. As explained in https://www.geoscientific-model-development.net/about/manuscript_types.html the preferred reference to this release is through the use of a DOI which is then cited in the paper. For projects in GitHub a DOI for a released code version can easily be created using for instance Zenodo, see https://guides.github.com/activities/citable-code/ for details.
