Interactive comment on "The NASA Eulerian Snow on Sea Ice Model (NESOSIM): Initial model development and analysis" *by* Alek A. Petty et al.

A. Kerkweg

kerkweg@uni-bonn.de

Received and published: 11 June 2018

Dear authors,

in my role as Executive editor of GMD, I would like to bring to your attention our Editorial version 1.1: http://www.geosci-model-dev.net/8/3487/2015/gmd-8-3487-2015.html This highlights some requirements of papers published in GMD, which is also available on the GMD website in the 'Manuscript Types' section: http://www.geoscientific-model-development.net/submission/manuscript_types.html In particular, please note that for your paper, the following requirement has not been met in the Discussions paper:

- "The main paper must give the model name and version number (or other unique

C1

    identifier) in the title."

Please provide in addition to the name a version number of NESOSIM in the title of your revised manuscript. Note, that a version number is important to identify the specific state of your developments.

As explained in https://www.geoscientific-model-development.net/about/manuscript_types.html. GMD is encouraging authors to upload the program code of models (including relevant data sets) as supplement or make the code and data of the exact model version described in the paper accessible through a DOI (digital object identifier). For projects in GitHub a DOI for a released code version can easily be created using Zenodo, see https://guides.github.com/activities/citable-code/ for details.

Yours, Astrid Kerkweg
