Supplement to "Computing Climate-Smart Urban Land Use with the Integrated Urban Complexity Model (IUCm 1.0)"

DOI & link to movie	Movie caption
https://doi.org/10.5446/35429	Movie S1. Evolution of the application of growth to Frankfurt, with a probabilistic model setting, showing how it would growth 58,000 inhabitants, in steps of 1,000 inhabitants.
https://doi.org/10.5446/35430	Movie S2. Evolution of the transformation of the idealized example of a polycentric city, with a probabilistic model setting, showing its transformation until 1M inhabitants would be moved, in steps of 1,000 inhabitants.
https://doi.org/10.5446/35431	Movie S3. Evolution of the transformation of the idealized example of a monocentric city, with a probabilistic model setting, showing its transformation until 1M inhabitants would be moved, in steps of 1,000 inhabitants.
https://doi.org/10.5446/35432	Movie S4. Evolution of the transformation of the idealized example of a high density city, with a probabilistic model setting, showing its transformation until 1M inhabitants would be moved, in steps of 1,000 inhabitants.
